MERIDIAN FORGE / WEEK 03 / ANALYST DOCUMENT

Stakeholder Map

Stakeholder Report · Revision 1968

Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

Nia, and the other operators are affected.
What Nia Does: Supervises night QA operations; oversees how the cell is used during the night shift
What Nia needs: The evidence to be contained and preserved. The review sessions scheduled around shift duties, and cooperation from night-shift.
Her account does not establish authority to approve funding or a system/line restart according to W03-S01
What the night shift does: Perform hands-on operational checks on the cell and record exceptions during the night shift.
What the night shift needs: Representation in the evaluation process to ensure the workflow is practical for execution on the floor.

Engineering

Elias contributes to the review by explaining command and records and reviewing technical interpretations, but he cannot trace the origin of the repeated command (W03-S02).
He needs read only exports with source details and access discussion before any delivery dates are promised. His technical expertise does not grant him record ownership or spending authority.

Operations

Mara's coordination role: Carry the recommendation into review.
Spending is another matter. We still need someone to be responsible for the spending and budget.

Mara can carry the final recommendation forward into review (according to W03-S04).

She can help seek and confirm missing contact details (W03-S04).

Sponsor and record custodian

Sponsor responsibility: approving the proposed work through the organization. the sponsor themselves doesnt have a name exactly.
The record custodian is:

Responsible for overseeing record management and access

2. Relationships and next steps

Competing needs and tradeoff

Daytime administrative meetings create scheduling conflicts for night-shift employees trying to maintain their operational capacity and duty. (W03-S01, W03-S04).
To bridge this gap, feedback should be acquired through overlap discussion between the shifts.
Physical documentation, such as within writing could help.

Consultation plan

Consult Nia
Consult the Lead Process/Manufacturing Engineer
Consult the Shift Production Supervisor and Operations Manager
without formal authority to approve funding or restarts, staff need a voice because administrative decisions often do not work in practice without ground-level approval.
Involving them uncovers hidden operational friction and prevents unrecorded approval or workflow tweaking.

Missing voices and validation

A night-shift operator still needs to be spoken to. During the shift overlap or during a phonecall they can provide an answer.
The record keeper must also be spoken to, as requested by Engineering (W03-S02).

Next step toward requirements

We need (in simple terms): to find the missing roles to fulfill. The map allows us to label our employees and prevent confusion regarding who is doing what. The map is a guideline.

3. Book evidence connection

> **Book form connection**
>
> The book itself provides you with an exact example of what we are trying to learn. The questions tie into the prompt. The plan was easily reinforced by the questions within the scenario and the work itself.

> **Book evidence filename**
