CIT 140 · Week 4 · Cedar Junction

# Validated Requirements Set

ReportWeek4 · Revision 697

## R-01 · functional

**Requirement:** The system must show when an arrived visitor is there via notification and do the same for awaiting confirmation as two separate statuses for intake and scheduling staff.

**Source:** W04-S01 · Dana Ruiz

**Rationale:** If I were using the word "held" for both situations it would cause confusion and delays.

**Acceptance check:** Staff can check by viewing an arrived visitor and an unconfirmed slot at the same time to ensure they can tell them apart without checking manual notes.

**Priority:** Must · **Validation:** Confirmed by Dana Ruiz

**Conflict or decision:** "Held" will mean an arrived visitor who cannot proceed, and"awaiting confirmation" will mean an unconfirmed slot.

## R-02 · user

**Requirement:** The system must display the specific status condition, who changed it, and the next approved step when an exception occurs.

**Source:** W04-S01 · Dana Ruiz

**Rationale:** Without this information, staff must make phone calls, causing intake delays and confusion.

**Acceptance check:** If an appointment has a status exception, when viewing the record, the exact condition, person who updated it, and next approved step are clearly displayed without extra research.

**Priority:** Must · **Validation:** Confirmed by Dana Ruiz

**Conflict or decision:** "Held" will mean an arrived visitor who cannot proceed, and"awaiting confirmation" will mean an unconfirmed slot.

## R-03 · business

**Requirement:** The system must allow a same-day slot to be offered only when both an available room and a qualified clinician are confirmed ready

**Source:** W04-S02 · Dr. Lena Okafor

**Rationale:** Verified capacity and readiness before Intake promises a start time to prevent scheduling conflicts and service breakdowns

**Acceptance check:** Given a room or clinician is unavailable, when staff try to book a same-day slot, then the system blocks the booking until both are ready.

**Priority:** Must · **Validation:** Confirmed by Dr. Lena Okafor

**Conflict or decision:** An appointment is confirmed only after both an available room and a qualified clinician are verified.

---

## R-04 · functional

**Requirement:** The system must notify affected staff and visitors with an updated expectation when readiness changes after confirmation, without disclosing clinical details.

**Source:** W04-S02 · Dr. Lena Okafor

**Rationale:** Staff and visitors need clear, actionable information to manage schedule changes while keeping things confidential.

**Acceptance check:** Given an appointment has been confirmed, when readiness status changes, then the system updates the expectation for the affected staff and visitor without displaying internal clinical details

**Priority:** Must · **Validation:** Confirmed by Dr. Lena Okafor

**Conflict or decision:** An appointment is confirmed only after both an available room and a qualified clinician are verified.

## R-05 · user

**Requirement:** The system must carry a visitor's approved communication preference and support needs via confirmation, rescheduling, and check in across all staff views available

**Source:** W04-S03 · Priya Shah

**Rationale:** Communication preferences appear in the access team's view but disappear in the intake queue which could lead to missing support needs.

**Acceptance check:** Given a visitor has a recorded communication preference, when the appointment moves through confirmation, rescheduling, and check-in, then the preference remains visible in both the access and intake queues.

**Priority:** Must · **Validation:** Confirmed by Priya Shah

**Conflict or decision:** Communication and support preferences will follow the appointment through booking, rescheduling, and check-in across all staff screens available.

---

## R-06 · constraint

**Requirement:** The system must provide an equivalent phone or staff-assisted route so that service access does not depend solely on the digital portal.

**Source:** W04-S03 · Priya Shah

**Rationale:** Visitors who cannot use the digital portal would be blocked from accessing the service.

**Acceptance check:** Given a visitor cannot use the portal, when they use the alternative phone or staff-assisted route, then they can successfully complete the same status inquiries and receive the same next actions.

**Priority:** Must · **Validation:** Confirmed by Priya Shah

**Conflict or decision:** Communication and support preferences will follow the appointment through booking, rescheduling, and check-in across all staff screens available.

## R-07 · nonfunctional

**Requirement:** The system must show only essential info on shared displays and hide detailed data based on staff roles.

**Source:** W04-S04 · Jordan Kim

**Rationale:** Shared screens need to protect visitor privacy by hiding sensitive details from unauthorized viewers.

**Acceptance check:** Given a shared screen, when an appointment is displayed, then only basic info is visible and detailed data is hidden.

**Priority:** Must · **Validation:** Confirmed by Jordan Kim

**Conflict or decision:** Shared screens show minimum info based on role, and all status changes log the user, old status, new status, and timestamp.

---

## R-08 · functional

**Requirement:** The system must retain who changed a status, its previous value, its new value, and the time of change in the status-change history.

**Source:** W04-S04 · Jordan Kim

**Rationale:** Keeping an audit trail is necessary to ensure accountability and resolve intake delays or status errors.

**Acceptance check:** Given an appointment status is updated, when staff view the status history, then the user, previous value, new value, and timestamp are clearly listed.

**Priority:** Must · **Validation:** Confirmed by Jordan Kim

**Conflict or decision:** Shared screens show minimum info based on role, and all status changes log the user, old status, new status, and timestamp.

# Professional Guidance Assessment

**IIBA:** IIBA is a professional association that defines business analysis standards, frameworks, and best practices like the BABOK Guide to align business needs with solution requirements.

**ISO/IEC/IEEE 29148:** ISO (International Organization for Standardization): Develops global standards across industries to ensure consistent quality, safety, and efficiency. IEC (International Electrotechnical Commission): Publishes international standards specifically for electrical, electronic, and related technologies. IEEE (Institute of Electrical and Electronics Engineers): Defines technical standards for computer science, networking, and software engineering.

**PMI:** PMI is about completing the project by bringing it all together, but Week 4 in particular is about analysis and building a framework for the report.

**Application:** The guidance helped me make R-06 more clear by changing its type to a constraint and clarifying the exact pass or fail verification steps using Given When and Then

Prepared in Command Nexus. Canvas remains the official submission point.
